

HI-VAC LTW – Portable Sanitation and Liquid Suction Hose

*smooth
bore interior*

*superior crush
resistance*

best in class flexibility

lightest hose in class

*new proprietary
resin formulation*

leak proof cuff design

*multiple sizes
available*

*available in optional
black/yellow color*

The Plastiflex HI-VAC portable sanitation and liquid suction hose is a robustly designed and built pumper truck evacuation, septic pumping, sewer cleaning, marine sanitation, wastewater and general industrial liquid suction service hose for use in heavy duty applications. Offering a smooth bore interior with superior crush resistance, the HI-VAC LTW hose is the preferred hose for medium to heavy duty service applications.

Utilizing a new proprietary polymer blend designed to offer 10% better flexibility with a 15% weight reduction versus the original HI-VAC product, the HI-VAC LTW hose will meet or exceed service performance levels against all competitors in its class.

By incorporating new design elements into the cap and channel sections, the HI-VAC LTW hose is designed to be the lightest and most flexible hose solution in the market while maintaining the robustness you expect from the HI-VAC product line.

As with the original HI-VAC hose, the HI-VAC LTW hose uses a 100% factory tested over-molded cuff technology to prevent leaking and cuff to hose separation.

Available in multiple sizes, the HI-VAC LTW portable sanitation and liquid suction hose is the new industry standard when it comes to continuous use suction environments.
